

Ensim puts you in control of ordering, bundling, provisioning, and billing.

Ensim's turn-key solution for launching Microsoft CSP with end-to-end automation and orchestration puts you in control of your business with self-service on-boarding and management for users, customers, and channel partners. Fully integrated with all CSP offers and pre-populated with marketing content, offers, and price plans aligned with Microsoft packages, you can launch in as little as a few days. Supports 2-Tier & 1-Tier CSP Partners.

Microsoft CSP Quick Start Program

Launch Quickly, Right NOW! - The complete Ensim solution can be provided fully configured out of the box on a single VM image and ready for use in your datacenter or with your own instance running in the Microsoft Azure Cloud - either way you can be up and running in just a few days!

Aligned with Microsoft - For over 12 years and with more than 5 million subscribers under management, Ensim has worked closely to support Microsoft's move to the cloud. The Ensim platform was co-developed with Microsoft to enable service providers to automate and orchestrate end-to-end CSP ordering, provisioning, invoicing and billing.

Complete Automation - The platform provides complete end-to-end user automation experience with customer self-sign up, ordering, provisioning, billing, invoicing and payment collection. This gives the service provider the ability to offer a complete quote to cash process all while seamlessly automating the entire customer life-cycle.

Bundle Any SKU or Solution - Your customers, partners, and sales team can place orders in the self-service portal for cloud solutions, professional services, or even physical goods - and you can expand later to add other on-premise and cloud offerings - anything is possible with Ensim!
